

SEEKERTAG / CLOCK IN 2026

What is yours. Back to you.

A private return channel that
connects owners and finders – with
rewards secured on Solana.

BUILT FOR SOLANA SEEKER | ANDROID • QR + NFC

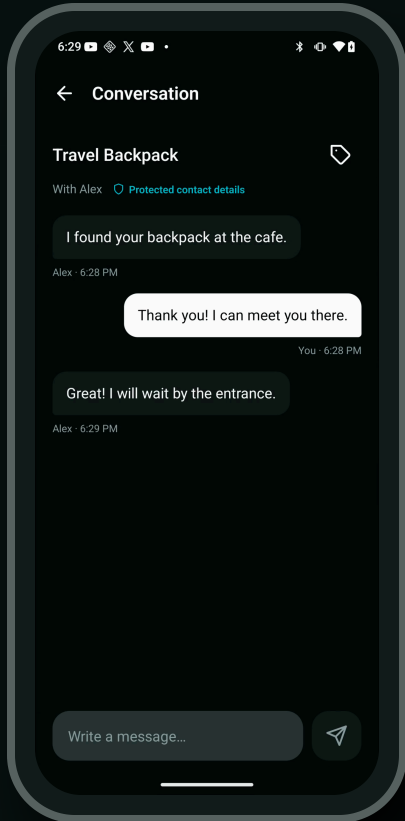

THE PROBLEM

A stranger may find your bag.
They still have no **safe reason**
or simple way to return it.

THE GAP

Phone numbers expose owners. Bluetooth trackers locate objects, but do not create a private conversation or guarantee a promised reward.

Scan. Talk. Return.

01 Tag what matters

Create an item, print its QR label as a PDF or write an NFC tag.

02 Open a private chat

Finders scan in the app with no account required. Chat and notifications keep contact details private.

03 Complete the handoff

The finder reviews a receiving address. The owner finishes the return and releases the reward from the conversation.

The reward is real before the return.

OWNER

Reserve in SKR

SKR is selected by default.
Choose an amount and term, then
approve with Seed Vault Wallet.

SOLANA

Hold it in escrow

The funded reserve is visible.
The owner cannot reclaim it
before the chosen term ends.

FINDER

Receive payment

Review a Solana receiving
address. After the handoff, the
owner signs to release the
reward.

Seeker sign-in and owner approvals use Mobile Wallet Adapter.
The finder can paste an address; connecting a wallet is optional.

Demonstrated on devnet with test SKR. SOL and USDC are also supported.

Start with Seeker. Expand to everyday carry.

200K+

**Solana Mobile devices
shipped**

Across Saga and Seeker: wallet and
dApp distribution built in.

100K+

Active Seeker owners

An initial audience for community
pilots, tag packs and rewards.

102.4M

Life360 MAU

Adjacent-market context: broad
demand for location and safety
products.

BUSINESS MODEL

Free to use. We earn when a return succeeds.

ITEM CREATION

Free

Unlimited items for now
No subscription required

SUCCESS FEE

5% only when a reward is delivered

NO RETURN

Reclaim the reward after the term ends.
No SeekerTag fee on refunds.

TAG PACKS

Optional physical QR/NFC tags

Refunds return the reward principal; network fees and account-creation costs are separate.
Physical tag pricing and margins remain pilot assumptions, pending supplier quotes and paid demand.

Seed the network
before something is
lost.

One Seeker event.
Hundreds of tagged
objects.
One measurable return
loop.

01

Tags activated

02

Scan → message

03

Completed returns

04

Second object
tagged

The core return loop already works.

ANDROID

Seeker + Seed Vault sign-in

LABELS

QR, PDF + NFC write screen

PRIVATE

Two-device chat +
notifications

RETURN

Address review + signed
payout

1 SKR → 0.95 + 0.05

Test SKR on devnet: 0.95 to Testuser · 0.05 fee.

[View finalized transaction](#) · [Watch the 2:46 demo](#)

Pre-launch · next proof: community pilot.

Simulated handoff; physical NFC write not tested.
